OUR VALUES

OUR MISSION

To provide user-friendly, secure and affordable technology solutions to businesses and event organizers across all industries. Whether it be a turnkey or self-managed solution, our goal is to offer a highly integrable system to our clients, who will not require IT assistance or prior knowledge to manage it.

OUR VISION

That TT-SEC becomes the leading technology solutions provider in the Middle East, and for AXESS to become an essential component in the operations of our clients' businesses and events, allowing for a seamless and safe experience for all.

LEADERSHIP

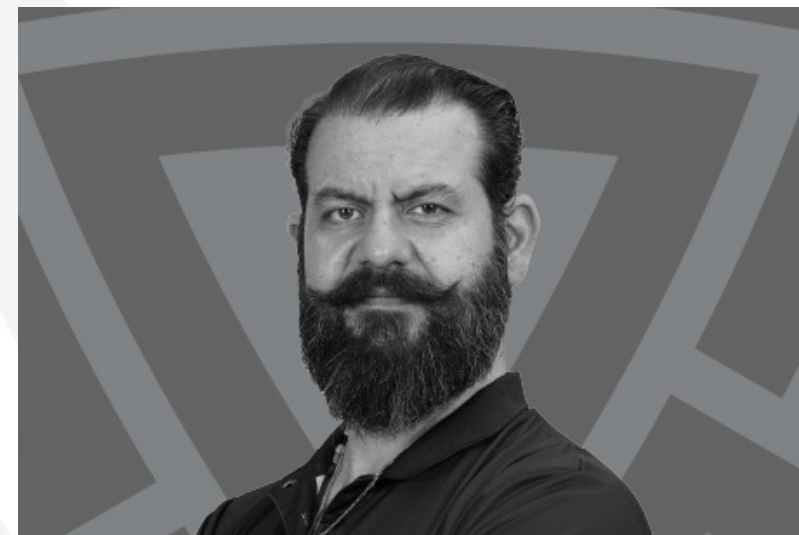

Dirk Schmidt
Founder & CEO

With over 25 years of experience within the field, Dirk has developed protocols and accreditation-, and access control systems for global events such as the FIFA World Cup. Over the decades, he has gained extensive knowledge in threat assessment, crowd management, and data intelligence. Being adaptable, capable, and business-minded, Dirk has successfully managed different situations, cultures, and companies around the world..

Didier Kassas
Founder & COO

With a background in event management and hospitality, Didier has spent the past decade working within the accreditation industry. He has been involved in the strategy development and accreditation of many high-risk events such as the FIFA World Cup, the Abu Dhabi Formula 1 Grand Prix, and the IDEX exhibitions. Didier has an unwavering dedication and drive to make a real difference.

Basheer Barakat
Regional Director - MENA

As an Event Access Control & Accreditation specialist, Basheer has accredited up to 75,000 people at a single event. He has a deep knowledge of TT-Sec Global's tools and software and truly understands the demanding nature of the event industry. He is excellent at thinking quickly on his feet during operations, which is a must when dealing with security matters

AXESS OVERVIEW

AXESS FEATURES

PROCESS ARCHITECTURE

AXESS, you will be able to deploy a well-tested and efficient accreditation process, that starts from the system setup architecture to the access control at the doors of the event venue. Depending on the complexity of the event, AXESS can adapt to all your needs, from a simple stand-alone venue to a more complex multi-venue, multi-day event. Below is an example of what an efficient accreditation process looks like.

System Set-up

To setup the system, we work closely with the client to ensure we meet their requirements.

Client Approval

Before we go live with the registration, we ensure that we get a final approval from the client.

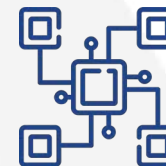

Online Registration

Once the online registration is open, we setup accounts and quotas and send personalized links to the organization's account managers.

Accreditation Center

It is crucial to set-up the accreditation-centers in such a way that creates a good flow of people and to have a good IT infrastructure.

Badge Distribution

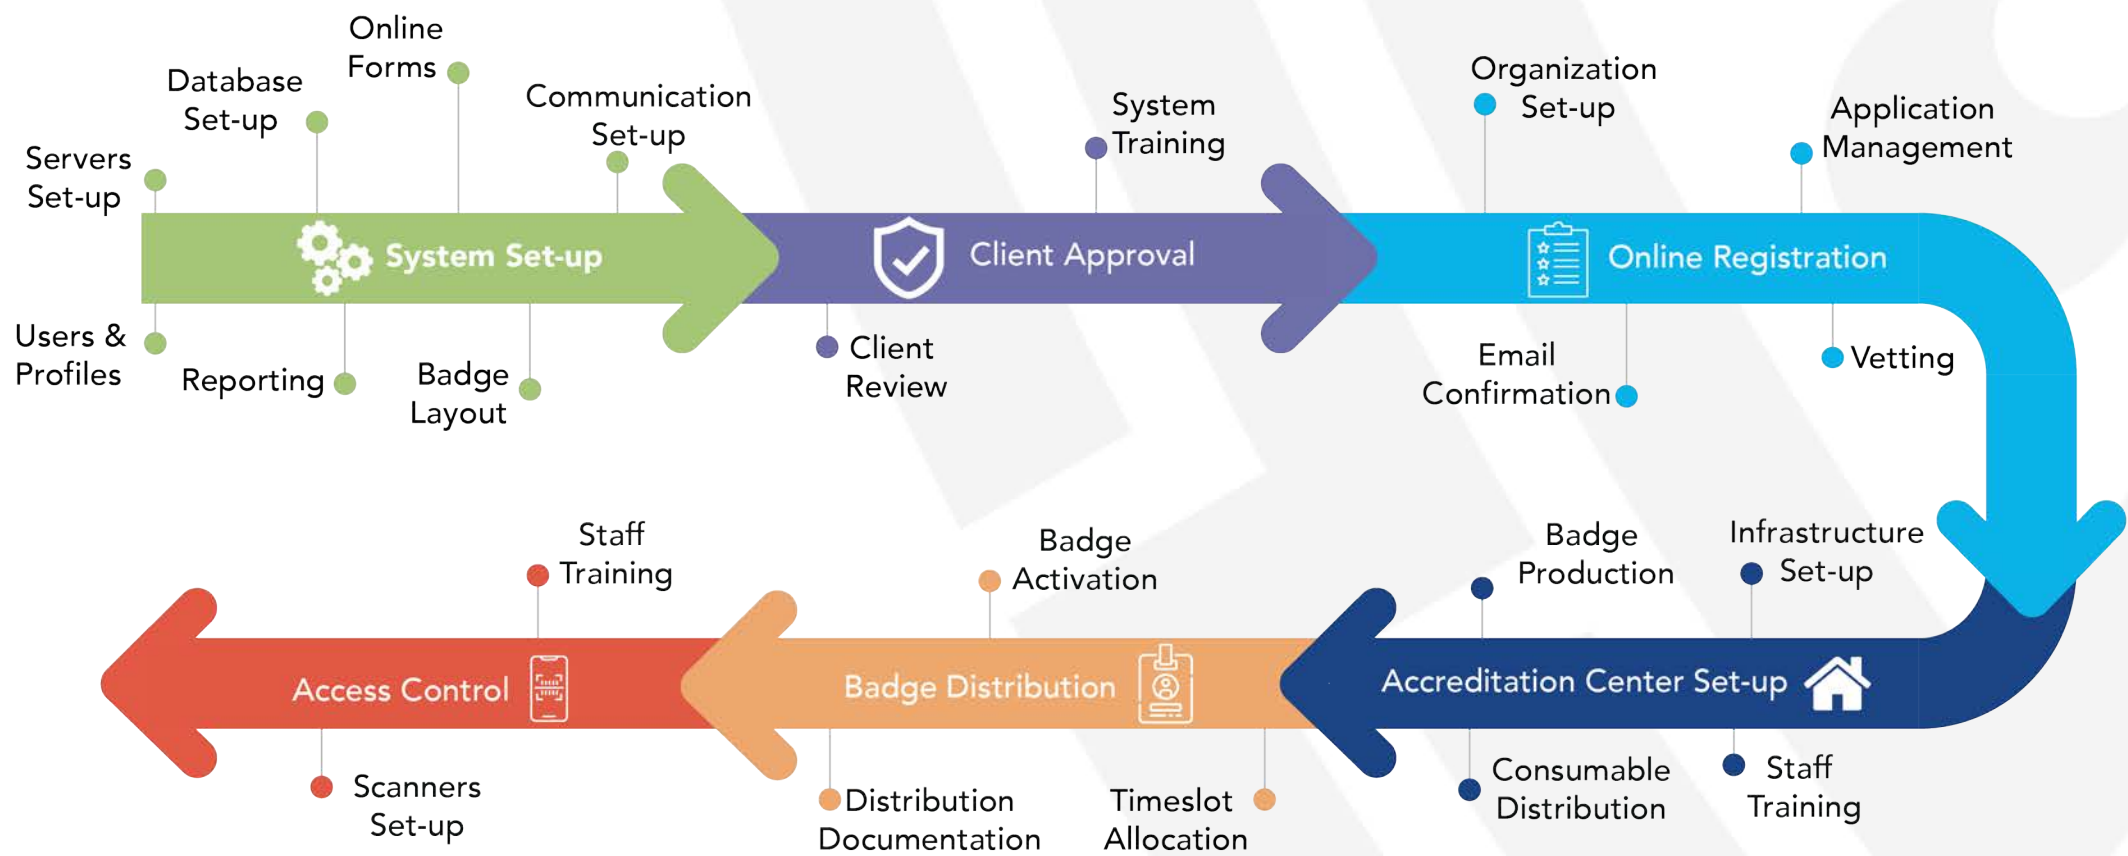

Once the vetting is completed, badge production and distribution will start. It is critical to keep track of all badges issued and handed over.

Access Control

Setting up the scanners and access control is important in order to ensure accurate reporting.
